

## DisplayPort 1:2 Switch

### FEATURES

- One Input Port to One of Two Output Ports
- Supports Data Rates up to 2.7Gbps
- Supports Dual-Mode DisplayPort
- Output Waveform Mimics Input Waveform Characteristics
- Enhanced ESD:
  - 12kV on all Main Link Pins
  - 10kV on all Auxiliary Pins
- Enhanced Commercial Temperature Range: 0°C to 85°C
- 56 Pin 8 × 8 QFN Package

### APPLICATIONS

- Personal Computer Market
  - Desktop PC
  - Notebook PC
  - Docking Station
  - Standalone Video Card

### DESCRIPTION

The SN75DP128A is a one Dual-Mode DisplayPort input to one of two Dual-Mode DisplayPort outputs. The outputs will follow the input signal in a manner that provides the highest level of signal integrity while supporting the EMI benefits of spread spectrum clocking. Through the SN75DP128A data rates of up to 2.7Gbps through each link for a total throughput of up to 10.8Gbps can be realized. The SN75DP128A supports Display Port Spec 1.1a.

In addition to the switching of the DisplayPort high speed signal lines, the SN75DP128A also supports the switching of the bi-directional auxiliary (AUX), Hot Plug Detect (HPD), and Cable Adapter Detect (CAD) channels. The Auxiliary differential pair supports Dual-Mode DisplayPort operation with the ability to be configured as a bi-directional differential bus while in DisplayPort mode or an I2C™ bus while in TMDS mode.

The SN75DP128A is characterized for operation over ambient air temperature of 0°C to 85°C.

### TYPICAL APPLICATION

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

	High-K	1109 mW	11.03 mW/°C	443.9 mW

- (1) This is the inverse of the junction-to-ambient thermal resistance when board-mounted and with no air flow.

## THERMAL CHARACTERISTICS

over operating free-air temperature range (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX <sup>(1)</sup>	UNIT
$R_{\theta JB}$ Junction-to-board thermal resistance	4x4 Thermal vias under powerpad		11.03		°C/W
$R_{\theta JC}$ Junction-to-case thermal resistance			20.4		= C/W
$P_D$ Device power dissipation DisplayPort selected	$\overline{LP} = 5V$ , ML: $V_{ID} = 600\text{ mV}$ , 2.7 Gbps PRBS; AUX: $V_{ID} = 500\text{ mV}$ , 1Mbps PRBS; HPD/CAD A and B = 5V; $V_{DD}^{*1} = V_{DD}$		300	340	mW
$P_{SD}$ Device power dissipation under low power	$\overline{LP} = 0V$ , HPD/CAD A and B = 5V; $V_{DD}^{*1} = V_{DD}$			85	μW

- (1) The maximum rating is simulated under 5.25 V VDD.

## RECOMMENDED OPERATING CONDITIONS

	MIN	NOM	MAX	UNIT
$V_{DD}$ Supply Voltage	4.5	5	5.25	V
$V_{DD}^{*1}$ HPD and CAD Output reference voltage	1.62		5.25	V
$T_A$ Operating free-air temperature	0		85	°C
<b>MAIN LINK DIFFERENTIAL PINS</b>				
$V_{ID}$ Peak-to-peak input differential voltage	0.15		1.4	V
$d_R$ Data rate			2.7	Gbps
$R_t$ Termination resistance	45	50	55	Ω
$V_{Oterm}$ Output termination voltage	0		2	V
<b>AUXILIARY PINS</b>				

**RECOMMENDED OPERATING CONDITIONS (continued)**

		MIN	NOM	MAX	UNIT
$V_I$	Input voltage	0		3.6	V
$d_R$	Data rate			1	MHz
<b>HPD, CAD, AND CONTROL PINS</b>					
$V_{IH}$	High-level input voltage	2		5.25	V
$V_{IL}$	Low-level input voltage	0		0.8	V

**DEVICE POWER**

The SN75DP128A is designed to operate off a single 5V supply.

**ELECTRICAL CHARACTERISTICS**

over recommended operating conditions (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
$I_{DD}$	Supply current LP = 5V, $V_{DD}^{*1} = V_{DD}$ ML: $V_{ID} = 600$ mV, 2.7 Gbps PRBS AUX: $V_{ID} = 500$ mV, 1 Mbps PRBS HPD/CAD A and B = 5 V		60	65	mA
$I_{DD}^{*1}$	Supply current $V_{DD}^{*1} = 5.25$ V		0.1	4	mA
$I_{SD}$	Shutdown current $\overline{LP} = 0$ V		1	16	$\mu$ A

**HOT PLUG AND CABLE ADAPTER DETECT**

The SN75DP128A is designed to support the switching of the Hot Plug Detect and Cable adapter Detect signals. The SN75DP128A has a built in level shifter for the HPD and CAD outputs. The output voltage level of the HPD and CAD pins is defined by the voltage level of the  $V_{DD}^{*1}$  pin. Explanation of HPD and the internal logic of the SN75DP128A is located in the application section at the end of the data sheet.

**ELECTRICAL CHARACTERISTICS**

over recommended operating conditions (unless otherwise noted)

**Auxiliary Pins**

The SN75DP128A is designed to support the 1:2 switching of the bidirectional auxiliary signals in both a differential (DisplayPort) mode and an I<sup>2</sup>C (DVI, HDMI) mode. The performance of the Auxiliary bus is optimized based on the status of the selected output port's CAD pin.

## ELECTRICAL CHARACTERISTICS

over recommended operating conditions (unless otherwise noted)

### Main Link Pins

The SN75DP128A is designed to support the 1:2 switching of DisplayPort's high speed differential main link. The main link I/O of the SN75DP128A are designed to track the magnitude and frequency characteristics of the input waveform and replicate them on the output. A feature has also been incorporated in the SN75DP128A to either increase or decrease the output amplitude via the resistor connected between the DPVADJ pin and ground.

### ELECTRICAL CHARACTERISTICS

over recommended operating conditions (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT

## APPLICATION INFORMATION

### SWITCHING LOGIC

The switching logic of the SN75DP128A is tied to the state of the HPD input pins as well as the priority pin and low power pin. When both HPD\_A and HPD\_B input pins are LOW, the SN75DP128A enters the low power state. In this state the outputs are high impedance, and the device is shutdown to optimize power conservation. When either HPD\_A or HPD\_B goes high, the device enters the normal operational state, and the port associated with the HPD pin that went high is selected. If both HPD\_A and HPD\_B are HIGH, the port selection is determined by the state of the priority pin.

Several key factors were taken into consideration with this digital logic implementation of channel selection as well as HPD repeating. This logic has been divided into the following four scenarios.

1. Low power state to active state. There are two possible cases for this scenario depending on the state of the low power pin:
  - Case one: In this case both HPD inputs are initially LOW and the low power pin is also LOW. In this initial state the device is in a low power mode. Once one of the HPD inputs goes to a HIGH state, the device remains in the low power mode with both the main link and auxiliary I/O in a high impedance state. However, the port associated with the HPD input that went HIGH is still selected and the HPD output to the source is enabled and follows the logic state of the input HPD (see [Figure 18](#)). The state of the Priority pin has no effect in this scenario as only one HPD input port is active.

Figure 18.

- Case two: In this case both HPD inputs are initially LOW and the low power pin is HIGH. In this initial state the device is in a low power mode. Once one of the HPD inputs goes to a HIGH state, the device comes out of the low power mode and enters active mode enabling the main link and auxiliary I/O. The port associated with the HPD input that went HIGH is selected and the HPD output to the source is enabled and follows the logic state of the input HPD (see [Figure 19](#)). This is specified as  $t_{Z(HPD)}$ . Again, the state of the Priority pin has no effect in this scenario as only one HPD input port is active.

Figure 19.

2. HPD Changes on the selected port. There are also two possible starting cases for this scenario:
  - Case one: In this case only one HPD input is initially HIGH. The HPD output logic state follows the state of the HPD input. If the HPD input pulses LOW, as may be the case if the Sink device is requesting an interrupt, the HPD output to the source also pulses LOW for the same duration of time with a slight delay (see Figure 20). The delay of this signal through the SN75DP128A is specified as  $t_{PD(HPD)}$ . If the duration of the LOW pulse is less than  $t_{M(HPD)}$ , it may not be accurately repeated to the source. If the duration of the LOW pulse exceeds  $t_{T2(HPD)}$ , the device assumes that an unplug event has occurred and enters the low power state (see Figure 21). Once the HPD input goes high again, the device returns to the active state as indicated in scenario 1. The state of the Priority pin has no effect in this scenario as only one HPD input port is active.

Figure 20.

Figure 21.

- Case two: In this case both HPD inputs are initially HIGH and the selected port has been determined by the state of the priority pin. The HPD output logic state follows the state of the selected HPD input. If the HPD input pulses LOW, the HPD output to the source also pulses LOW for the same duration of time, again with a slight delay (see Figure 22). If the duration of the LOW pulse exceeds  $t_{T2(HPD)}$ , the device assumes that an unplug event has occurred and the other port is selected (see Figure 23). The case in which the previously selected port with priority goes high again is covered in scenario 3.

Figure 22.

Figure 23.

3. One channel becomes active while other channel is already selected. There are also two possible starting cases for this scenario:
  - Case one: In this case the HPD input that is initially HIGH is from the port that has priority. Since the port with priority is already selected, any activity on the HPD input from the other port doesnot have any effect on the switch whatsoever (see [Figure 24](#)).

Figure 24.

- Case two: In this case the HPD input that is initially HIGH is not the port with priority. When the HPD input of the port that has priority goes high, the HPD output is forced LOW for some time in order to simulate an unplug event to the source device. The duration of this LOW output is defined as  $t_{T2(HPD)}$ . If the HPD input of the port with priority pulses LOW for a short duration while the  $t_{T2(HPD)}$  timer is counting down, the timer is reset. Once this time has passed the switch switches to the port with priority and the output HPD

once again follows the state of the newly selected channel's HPD input (see Figure 25).

Figure 25.

4. 4. Priority pin is toggled. There are also two possible starting cases for this scenario:
  - Case one: In this case only one HPD input is HIGH. A port whose HPD input is LOW cannot be selected. In this case, the state of the priority pin has no effect on the switch (see Figure 26).

Figure 26.

- Case two: In this case both HPD inputs are HIGH. Changing the state of the priority pin when both HPD inputs are high forces the device to switch which channel is selected. When a state change is detected on the priority pin, the device waits for a short period of time  $t_{T1(HPD)}$  before responding (see Figure 27). The purpose for this pause is to allow for the priority signal to settle and also to allow the device to ignore potential glitches on the priority pin. Once  $t_{T1(HPD)}$  has expired, the HPD output is forced LOW for  $t_{T2(HPD)}$  and the device follows the chain of events outlined in scenario 3 case 2.

Figure 27.

**PACKAGING INFORMATION**

Orderable part number	Status (1)	Material type (2)	Package   Pins	Package qty   Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)

SN75DP128ARTQT.B	Active	Production	QFN (RTQ)   56	250   SMALL T&R	Yes	NIPDAU	Level-3-260C-168 HR	0 to 85	DP128A

(1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

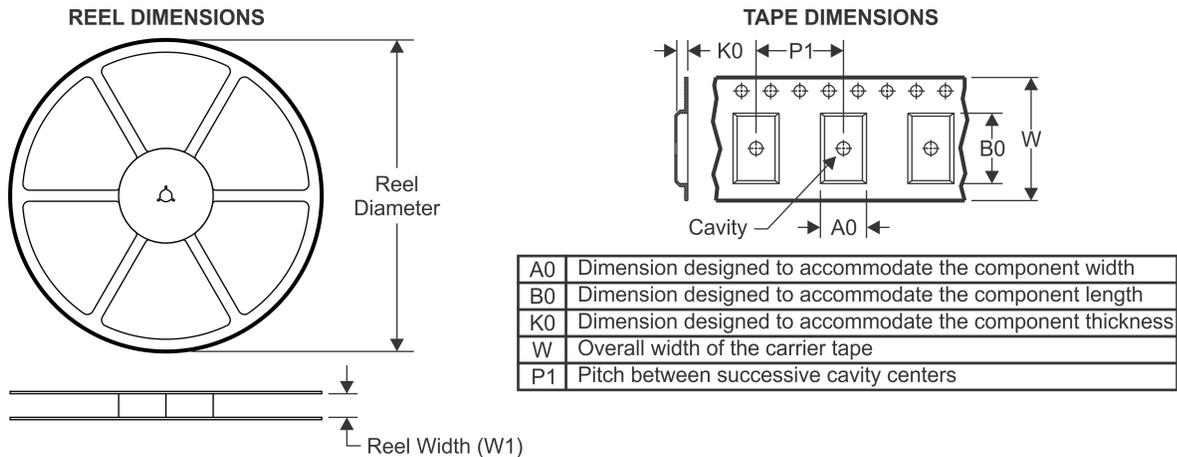

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

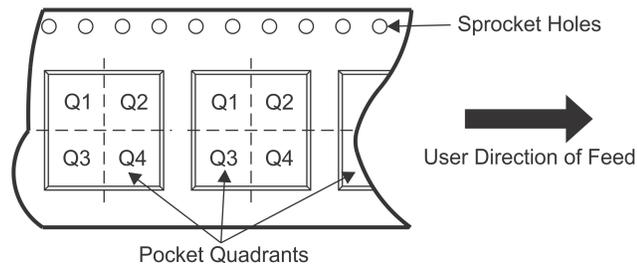

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## TAPE AND REEL INFORMATION

### QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE

\*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
SN75DP128ARTQR	QFN	RTQ	56	2000	330.0	16.4	8.3	8.3	1.1	12.0	16.0	Q2
SN75DP128ARTQT	QFN	RTQ	56	250	180.0	16.4	8.3	8.3	1.1	12.0	16.0	Q2

**TAPE AND REEL BOX DIMENSIONS**

\*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)
SN75DP128ARTQR	QFN	RTQ	56	2000	367.0	367.0	38.0
SN75DP128ARTQT	QFN	RTQ	56	250	210.0	185.0	35.0

## GENERIC PACKAGE VIEW

8 x 8, 0.5 mm pitch

PLASTIC QUAD FLATPACK - NO LEAD

Images above are just a representation of the package family, actual package may vary.  
Refer to the product data sheet for package details.

4224653/A

RTQ0056A

VQFN - 1 mm max height

VQFN

4218798/A 09/2013

NOTES:

1. All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for thermal and mechanical performance.

4218798/A 09/2013

NOTES: (continued)

4. This package is designed to be soldered to a thermal pad on the board. For more information, see QFN/SON PCB application report in literature No. SLUA271 ([www.ti.com/lit/slua271](http://www.ti.com/lit/slua271)).

4218798/A 09/2013

NOTES: (continued)

5. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

## IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATA SHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#) or other applicable terms available either on [ti.com](https://www.ti.com) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
