■ Handling Precautions

1. Soldering Specifications

- (1) Manual Soldering
Device : Soldering iron
380°C, Max.; 3 seconds, Max.
- (2) Auto Soldering
Device : Jet wave type or dip type
275°C, Max.; 6 seconds, Max.
 - Pre-heating should be done at temperatures ranging from 80°C to 120°C and within 120 sec.

■ Packaging Specifications

2. Flux Cleaning

- (1) Solvent : Fluorine or Alcohol type.
- (2) Cleaning after soldering should be done after the terminal temperature falls to 90°C or below, or after leaving the switch for five minutes or longer at room temperature.
AS series are not process sealed and are not washable. If the PC board is to be cleaned, clean the soldering surface of substrate with a brush so that the switch is not exposed to the cleaning solution.
- (3) Do not use ultrasonic cleaning system.

3. Mounting of Switch

- (1) Use the PC boards of $\phi 1$ holes.
- (2) Do not bend the terminals before mounting the switch on the PC board.
- (3) After mounting the switch, do not place the device in such a way that the device weight will be applied on the knob, etc. of the switch.
- (4) Do not apply load exceeding 12.7 N (1.3 kgf) to the knob. Use a bracket (optional accessory) if the load is expected to exceed 12.7 N (1.3 kgf). The strength of the knob will be reinforced to 29.4 N (3 kgf) max.

■ Shorting (Make-Before-Break)

A switch which momentarily connects both circuits when the actuator is moved from Point A to B in the below figure.

All switches which are not marked as “Shorting” are “Non-shorting” (Break-Before-Make).
