

Transportation Attitude Reference System Ruggedized Inertial Measurement Unit (IMU)

DESCRIPTION

The Transportation Attitude Reference System (TARS-IMU) is a packaged sensor array designed to report vehicle angular rate, acceleration, and attitude data for demanding applications in industries such as heavy-duty, off-highway transportation.

The TARS-IMU enables autonomous vehicle characteristics and enhances efficiency and productivity by reporting key data required to automate and monitor movements of vehicle systems and components. The sensor fusion algorithm may be customized for specific vehicle applications via on-board firmware, allowing movement data to be filtered for extraneous environment and vehicle movements.

With two sensor models for different power levels, the TARS-IMU accommodates both 5 V and 9 V to 36 V vehicle power systems. Communication is transmitted using industry standard CAN J1939 connectivity. As a standard, TARS-IMU is calibrated on aerospace-grade rate tables at the factory to provide enhanced calibration consistency between units.

Customization

The TARS-IMU may be customized to best meet application needs using the TARS Configurator Tool (TCT) software to change selected parameters such as broadcast rate, orientation, filter settings, etc. This tool creates a unique personality file which is then uploaded to the TARS-IMU for implementation.

DIFFERENTIATION

- **Flexible.** On-board firmware customizes the TARS-IMU to the specific vehicle for its designed application.
- **Durable.** With top-of-the-line sealing (IP67, IP69K), the TARS-IMU is ruggedized to withstand harsh or heavy-duty applications.
- **Convenient.** The TARS-IMU is delivered with customizable firmware that allows manufacturers to use a single part number across vehicles and applications. If preferred, the TARS-IMU may be pre-configured at the Honeywell factory for immediate installation out of the box.

VALUE TO CUSTOMERS

- Designed to allow vehicle manufacturers and end users to increase efficiency with the automation of repetitive movements and complex tasks
- Enables precise movement, actuation, and guidance over severe terrain and vehicle grades
- Enhances safety through monitoring and guidance capabilities to promote the productivity of operators

POTENTIAL APPLICATIONS

- Equipment control
- Linkage tracking
- Bucket control
- Work monitoring
- Vehicle stability control
- Operator assisted control
- Performance and output control
- Linear position

FEATURES

- High performance IMU reports vehicle angular rate, acceleration and inclination data (6 degrees of freedom, see Figure 1)
- Ruggedized PBT thermoplastic housing design for many demanding applications and environments (IP67 and IP69K certified)
- Advanced filtering of raw sensor data to minimize unwanted noise and vibration promotes positioning accuracy
- Supports 5 V and 9 V to 36 V vehicle power systems
- Operating temperature of -40°C to 85°C [-40°F to 185°F]
- Customizable via TCT software available on the web
- Reduced power consumption
- Small form-factor
- Optional metal guard for added protection

TARS-IMU joins Honeywell's venerated sensor portfolio, adding to the ever-increasing connected and intelligence driven capabilities that Honeywell offers. TARS-IMU is built to withstand the demanding applications in industries like off-highway transportation and beyond.

¹ Sensors are calibrated in the following ranges: ±60 deg/s for angular rate, ±9.80665 m/s² for acceleration, and ±30 deg for pitch and roll. Calibrated ranges may be extended to maximums shown with deviation to performance specifications.

- Angular rate outputs per PGN 61482; Z-down convention required by J1939.
- Acceleration outputs per PGN 61485; Z-up convention required by J1939.
- Pitch and roll outputs per PGN 61481; Z-down convention required by J1939.

² Accelerometer resolution is limited by the J1939 protocol.
