Fieldbus Coupler PROFINET IO; 3rd Generation; Advanced
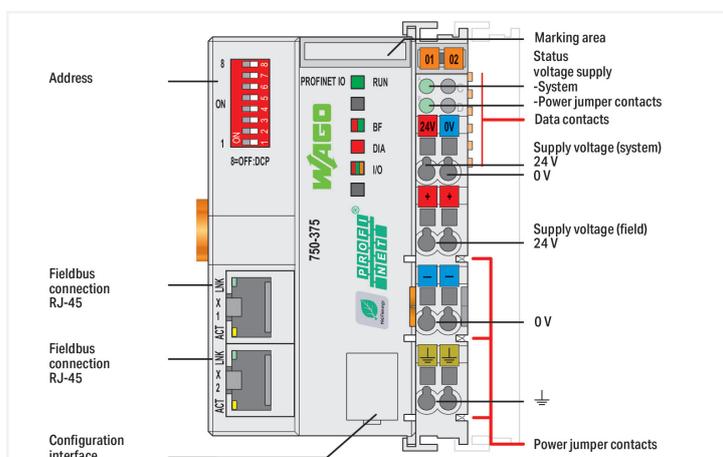

https://www.wago.com/750-375

Color: ■ light gray

This fieldbus coupler connects the WAGO I/O System 750 to PROFINET IO (open, real-time Industrial ETHERNET automation standard).

The coupler identifies the connected I/O modules and creates local process images for maximum two I/O controllers and one I/O supervisor according to preset configurations. This process image may include a mixed arrangement of analog (word-by-word data transfer) or complex modules and digital (bit-by-bit data transfer) modules.

The fieldbus coupler operates as an I/O device in the network. It features an integrated 2-port switch, simplifying the creation of a line structure without additional network components.

The device name can be assigned via DCP protocol or a default name can be instantiated via DIP switch.
