*IFP Conditions: Pulse Width≤10msec duty≤1/10

* All high power emitter LED products mounted on aluminum metal-core printed circuit board, can be lighted directly, but we do not recommend lighting the high power products for more than 5 seconds without a appropriate heat dissipation equipment.

*Re-flow,wave peak and soak-stannum soldering etc.is not suitable for High power integrated light source. *Suggest to solder it by professional high power LED soldering machine.

*Can use invariable-temperatur e searing-iron with soldering condition :<260 degree less than 3 seconds.

Tape Specifications (Units : mm)

Reel Dimensions:

Moisture Resistant Packaging:

Note: The tolerances unless mentioned is $\pm 0.1 \text{mm}$, Unit: mm

Other points for attention:

- 1. No pressure should be exerted to the epoxy shell of the SMD under high temperature.
- 2. Do not scratch or wipe the lens since the lens and gold wire inside are rather fragile and cross out easy to break.
- 3. LED should be used as soon as possible when being taken out of the original package, and should be stored in anti-moisture and anti-ESD package.
- 4. Do not stack together assembled PCBs containing LEDs. Impact may scratch the silicone lens or damage the internal circuitry

Storage:

1. It is recommended to store the products in the following conditions:Humidity: 60% R.H. Max.Temperature : $5^{30}(41^{8}6)$

2. Shelf life in sealed bag: 12 month at 5^{30} and 60% R.H. after the package is Opened, the products should be used within a week or they should be keeping to stored at 20 R.H. with zip-lock sealed.

Baking:

It is recommended to baking before soldering when the pack is unsealed after 12hrs. The Conditions are as followings:

 $1.\,70\pm3\,^\circ\!\mathrm{C}$ (12 $\sim\!24\mathrm{hrs}$) and 5%RH, taped reel type

 $2.\,100\pm3\,^\circ\!\!\mathrm{C}$ 1hrs , bulk type
